

Supporting community colleges with cybersecurity resources

With the increasing demand for cybersecurity talent, Microsoft is committed to supporting community colleges, their faculty, and students to develop and grow cybersecurity programs and help build an inclusive cybersecurity workforce.

As part of our [overall commitment](#), Microsoft has partnered with the American Association of Community Colleges to launch a community of practice for institutions offering cybersecurity education. Grants provide funding and technical assistance to selected community colleges who are accelerating their cybersecurity programs. To learn more or to apply for the next round of grants, visit aka.ms/CyberSkillsForAll.
